

Client Memo:

Matriz de Seguridad / Data Stage

Data Stage / Matriz de Seguridad

How does it work?

The Data Stage is a report issued by the financial authorities which includes important information regarding the foreign trade operation from customs documents and (Pedimentos) and electronic value vouchers (COVE). One registered the report will be send on a monthly basis via email to the subscribed contacts.

What are the advantages?

The data stage is a control mechanism both for internal control purposes and for the accounting department.

- **Import Tax Credit/Refund:** In order to credit and/or claim back the paid import VAT a complete and correct documentation is crucial. The corresponding VAT has to be declared in the month in which the customs document is issued.
- **Completeness of original documents:** Companies are obliged to store the originally stamped customs documents physically. With the data stage you can assure that no information is missing.
- **Correct Information:** Reviewing the information from the data stage you are able to verify all documents issued in your name and avoid fraud.

How to register?

In order to register a company within the program, the required documents (format, RFC, Power of Attorney) have to be submitted to the General Administration Office in Mexico City personally. Once processed, the confirmation has to be collected personally at the institution.
